

700mL Bulk Serve

Precise Thick-N INSTANT Bulk Preparation Directions for Use

Step 1: Clean hands thoroughly before handling pump.

Step 2: Shake well before pump insertion.

Step 3: Assemble and prime pump. Push tube into bottom of the pump firmly, making sure the diagonal cut end is at the bottom of the pump. Remove the blue lid from the product bottle. Open the pump by twisting the top part of the pump anti-clockwise. Carefully insert the pump into the product and screw the pump onto the bottle base clockwise until tight. Prime the pump by pressing it down fully several times until an unbroken stream of product flows from the nozzle.

Step 4: Measure **700mL** of the liquid to be thickened into a container.

Step 5: Add the following number of pumps using the pump dispenser.

Notes:

- ✓ Make sure that you use full strokes.
- ✓ A full stroke of the pump means to push the pump right to the bottom of the stroke and to let it return without assistance to the top of its stroke – this is signalled by the black line on the neck of the pump becoming visible.

Step 6: Stir with a spoon for 30 seconds to mix in concentrate, then serve.

Step 7: IMPORTANT At the end of the day, gently wipe the pump nozzle with an alcohol wipe.

Step 8: The pump will start spitting at the end of the bottle. You must dispose of the drink/jug you are making. A new bottle & pump is required.

Do NOT wash pumps. Do NOT reuse. A new pump is available for every bottle.

Refrigerate drink as required.

Precise Thick-N INSTANT Single Serve Directions for Use

Step 1: Clean hands thoroughly before handling pump.

Step 2: Shake well before pump insertion.

Step 3: Assemble and prime pump. Push tube into bottom of the pump firmly, making sure the diagonal cut end is at the bottom of the pump. Remove the blue lid from the product bottle. Open the pump by twisting the top part of the pump anti-clockwise. Carefully insert the pump into the product and screw the pump onto the bottle base clockwise until tight. Prime the pump by pressing it down fully several times until an unbroken stream of product flows from the nozzle.

Step 4: Measure **100mL** of the liquid to be thickened into a cup or tumbler.

Step 5: Add the following number of pumps using the pump dispenser.

Notes:

- ✓ Make sure that you use full strokes.
- ✓ A full stroke of the pump means to push the pump right to the bottom of the stroke and to let it return without assistance to the top of its stroke – this is signalled by the black line on the neck of the pump becoming visible.
